Bridging the Gap: Integrating Your Token with
Shibarium

5. Doggy Bytes

GM Shib Army!

In the 66th edition, we proudly share with you a deluge of exciting updates from Shib Games, featuring a new game, Shiba Eternity upgrades, Lap Dogs tournaments, a new Metaverse mini-game, a major Metaverse enhancement, and more!

Let's start with Shibbridge — a captivating construction game where Shiboshis engage in hilarious antics. With 15 levels, 10 characters to choose from, and so many colorful bricks, this game promises to turn up the cuteness and competitiveness of your Shiboshi.

Are you ready for more explosive announcements from Shib Games? We're talking SHIB duels and real-time card battles in Shiba Eternity. Prepare to import your Shiboshi NFTs into Shiba Eternity and Agent Shiboshi as well! On top of that, tournaments for Lap Dogs are coming while Shiboshi and Sheboshi NFTs invade its gameplay.

Discover how Shiba Inu is transforming the gaming landscape by providing SDKs that enable seamless Web3 integration.

Metaverse fans who also dabble in gaming can find a pleasant surprise in this edition, and while we can't spoil anything just yet, here are some hints: hook, fish, \$TREAT.

Speaking of the Metaverse, its latest upgrade features easier browser access, improved chat features, and an innovative creative space for landowners.

For token devs out there, our 'Shib Dev Insights' article offers valuable guidance on linking ERC-20 tokens to Shibarium via the CCIP or the Shiba Inu PoS Bridge.

Last but not least, don't miss the new 'Doggy Bytes,' with a more improved format crafted to give our readers a more engaging and enjoyable experience!

The Power of Play

Play is not just an escape, but a transformative force reshaping how we work, innovate, and connect in the digital age, unlocking new possibilities for creativity, collaboration, and societal change.

Play is everywhere today — not just in games, but in the way we learn, work, and connect. It's a force of creativity, collaboration, and transformation, shaping the future of industries, relationships, and even governance.

Humanity's pursuit of meaning, joy, and connection is as old as civilization itself. From the first games and rituals to the immersive virtual worlds of today, play has always been more than just entertainment. It has been a vital tool for

creativity, expression, and growth, enabling us to reimagine our world and interact in new and profound ways.

As we enter the digital, more intelligent era, play has evolved from childhood pastimes to something much greater. No longer confined to the edges of culture, play is now at the heart of innovation, business, and even governance. It is a creative force, driving new technologies, communities, and digital economies, transforming the way we engage with the world.

The Playground of Possibilities

In many ways, today's digital landscape is a modern-day playground, one where creativity and collaboration take center stage. Whether it's through the gamification of daily tasks, the creation of virtual economies, or the development of new forms of social interaction, play is transforming the way we live, work, and learn.

Like the [Athenian Agora](#), where intellectual debate and civic participation created a space for flourishing ideas, the digital space today is giving rise to new ways of interacting, learning, and growing. And just like the ancient games that shaped culture, today's play isn't just fun — it's serious business. [Play in the digital era](#) has become a powerful tool for innovation and a medium through which we are reimagining our future.

The Fun of Innovation

The power of play is not simply in its capacity for entertainment; it is in how it catalyzes creativity. Think about how game developers use [virtual worlds](#) to create immersive experiences, or how digital artists engage with interactive environments to push boundaries. Play frees the mind from conventional constraints and encourages bold experimentation.

In this edition, we explore how play is not merely an escape from reality, but a mechanism for rethinking that very reality. Whether it's through the lens of games, or creative expression, we are witnessing a shift in how we engage with the world and each other.

Play is the New Currency

Just as the emergence of blockchain in the last edition redefined concepts of [governance](#) and sovereignty, play is now recontextualizing our understanding of value, culture, and community. [Gamified systems](#) are emerging in industries ranging from business to education, offering new ways to incentivize, engage, and evolve.

But perhaps the most radical shift of all is how play is empowering individuals. It is no longer confined to players but a universal medium of connection, transformation, and collaboration.

The idea that play could become a means of empowerment and social change is becoming increasingly evident. From education to health, we are discovering how integrating elements of play into serious endeavors can unlock creativity, enhance collaboration, and solve some of the world's most pressing challenges.

Imagining the Future of Play

What if the future of work looked like a game? What if we could reimagine productivity, creativity, and collaboration as the playful pursuit of [new ideas](#), rather than rigid tasks and expectations? These questions represent the beginnings of a new way of thinking about play, one that has the potential to unlock untapped human potential and foster the next generation of solutions to global problems.

This edition invites you to explore the dynamic and multifaceted world of play — not just as a form of escape, but as a driving force behind [innovation](#), connection, and growth in the digital space.

We delve into the thrilling launch of Shibridge, where the “silly scramble” for Shiboshi construction is unfolding; the revolutionizing impact of Shib Games, with epic duels, card integration, and the rise of new metaverse experiences.

A PLAYful revolution is on the horizon, reshaping our engagement with the world. Virtual and augmented realities are revealing play's transformative power to connect, collaborate, and drive change. As we explore this new era of creativity, we recognize that play is not just fun but a powerful tool for building, creating, and reimagining a better future.

Let's play, let's create, and let's build this future together.

SHIBBRIDGE

Shibridge: The Silly Scramble For Shiboshi Construction

Dive into the Shiba Inu universe with Shibridge, a silly and addictive construction game where you can watch Shiboshis smack each other around.

Here's a cheeky little game that's barking up our alley: Shibridge, where your delightfully doglike Shiboshis race to amass colored bricks, build precarious planks, and hop their way to the next level — all while giving their rivals a good shove when necessary. Sounds a bit daft? It is, and that's precisely why we love it.

Shibridge: Doggos, Bricks, and Bridge-Building — Oh My!

First things first, you're a plucky Shiboshi (picture an adorable pup who's clever enough to do construction work).

Your mission, should you choose to accept it (you do, because Shiba Inus can't resist fetch quests), is to collect as many colored bricks as your furry back can carry. Then you'll carefully assemble a bridge — like some canine version of Bob the Builder — leading from your starting platform to the finish line. Reach that [promised land](#) first, and you're whisked away to the next stage.

Shibridge throws you into a whirlwind of brick-building madness, with each session feeling fresh and unpredictable. The game's 15 unique levels, featuring three distinct stages each, create a seemingly endless variety of bridge-building scenarios, guaranteeing that no two playthroughs are ever quite the same.

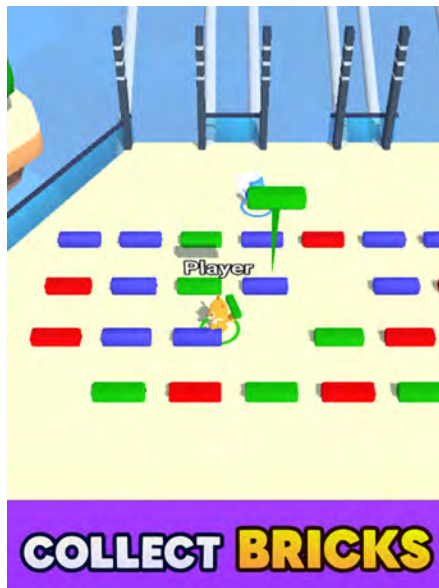

The core charm lies not in deeply granular customization of the world itself, but in the joyful antics of the 10 playable characters and the sheer chaos of their competition. Want to stand out from the pack a little?

The Shop does offer a way to personalize your Shiboshi's appearance with unique traits. But could we see our own NFT Shiboshis imported into a Web3 version someday... Hmm? Thoughts, readers?

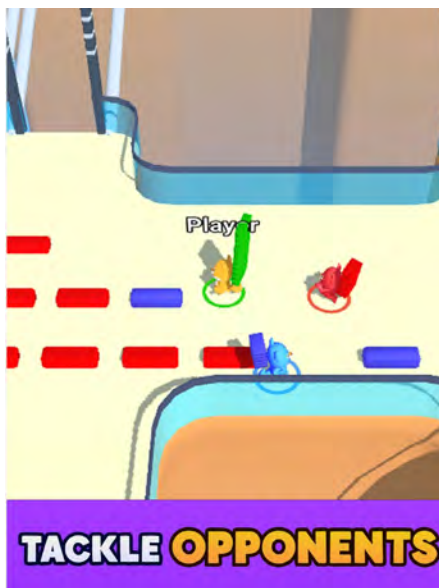

But it wouldn't be a proper shenanigan if your fellow Shiboshis just stood by politely. Instead, they want your bricks and your bridge. So they'll tackle you in mid-gather, hoping to scatter your hard-earned rainbow lumps across the field like confetti at a dog birthday party. Or, they will lay over their own bricks onto your unfinished bridge and own it. Rude, yes, but oh-so-satisfying when you get to dish out the same treatment.

The Great Bricky Scramble

At the start of each round, your Shiboshi spawns on a platform looking as innocent as a pup in a pet store window. Then, like a supersonic toddler in a toy aisle, you dash headlong for those lovely, gleaming bricks. Collecting them is a breeze — walk into them, or do a little jumping dance if you must — and they stack neatly in your Shiboshi's inventory (though you'll probably be leaving a trail of drool).

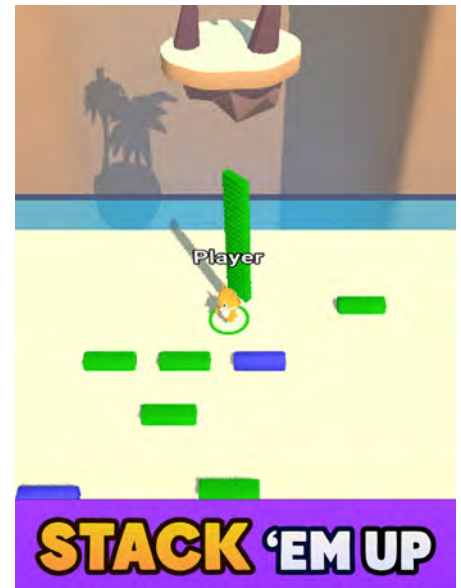

Here's the catch: The more bricks you carry, the more tempting a target you are for other Shiboshis. They can (and will) tackle you, which sends your cargo tumbling into the abyss or scattering around the [platform](#). This is where your cunning dog instincts come into play. Maybe build your bridge in smaller bursts — pop down a few bricks at a time — so you're less likely to lose a massive stash all at once.

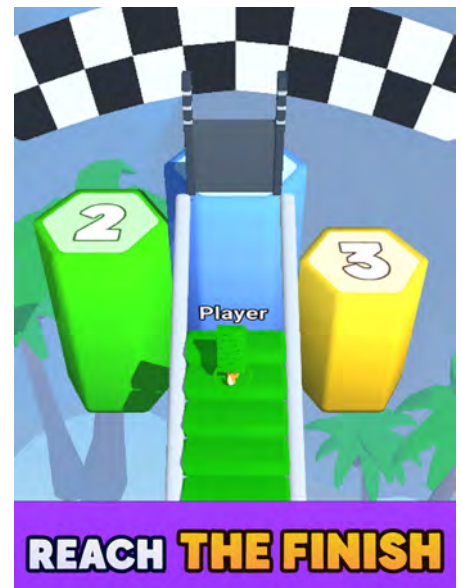

Shibridge Building Is Easy (When You're Not Being Punted)

When you're not exchanging playful headbutts with your two-legged frenemies, you'll want to slap those bricks onto your construction zone. Simply approach your designated building area and watch your colorful blocks slot into

place. It's rather like assembling Lego under a strict time limit, but with the added thrill of potential backside tackles.

Keep going until you can trot your happy Shiboshi self across that freshly minted walkway to the next level. Oh, and watch your step: some clever pup could wallop you mid-bridge, sending you into the void while they [claim victory](#). Dog-eat-dog world, indeed.

Tackling Tactics and Other Sneaky Tricks

Play Dirty (But Not Too Dirty): Sure, you can sabotage your friends (or AI foes). However, overdo it, and you might waste precious seconds you could've spent building. Balance aggression with efficiency.

Big Bricks, Big Risk: Hauling 10 bricks is epic — right up until you're body-slammed. Deposit them in smaller doses to keep your progress secure.

Momentum is King: Shibridge can be a speedy little affair. Zip around, nab bricks quickly, and never linger in one spot too long. If you stand still, you're a sitting duck (or dog, as it were).

Mind the Corners: Corners or edges can be safe-ish spots to regroup and place a few bricks, but be ready to dodge the next flying tackle from behind.

Shibridge: The Long and Short of It

In a nutshell, Shibridge is a colorful collision of canine cunning and platformer pandemonium. It's the type of game that sparks both shrieks of laughter and shouts of frustration — usually within the same 30 seconds.

For those who like their chaos cute, it's a delightful romp with a dash of sabotage on the side.

When the team behind Shibridge set out to create the game, they had a clear vision in mind: a game that wasn't just another typical platformer. Shibridge needed to stand out — not only with its playful, chaotic gameplay but also with the underlying mission to [integrate elements](#) of the Web3 space.

According to Angel, the Shib Games lead, "There's something ridiculously satisfying about stacking bricks and outpacing your opponents, especially when you're a tiny, unstoppable Shib. We wanted to capture that rush of collecting and racing while keeping it lighthearted and fun. Shibbs make everything better, after all!"

As Max Vergil, the game's designer, explained, the goal was to craft something distinct from the high-octane action of Agent Shiboshi: "Shibridge provides the players with a unique mode of gameplay... the excitement and thrill is still there, but it's less action-oriented and more planning intensive - collect bricks, tackle opponents to make them drop their bricks, and overwrite others' bridges to reach the finish line first!"

Who needs a stoic city-building sim when you can watch adorable pups knock each other off floating platforms? After all, half the fun is watching your majestic, rainbow-toting Shiboshi tumble into the great unknown — then bounding right back up with wagging tail and renewed determination.

PLAY ON WEB2

Shibbridge: What's Next?

Currently, you can grab it on the Google Play Store and Apple App Store — though we can expect a [Web3](#) version to roll out soon.

And speaking of the future, Angel added: "We're launching first on mobile, but this is just the beginning. As you will read throughout the edition, our roadmap is focused on bringing more fast and competitive experiences to players. Whether it's new games, fresh ways to play, or expanding into web3 when the time is right, we're always looking ahead."

But that's not all the Shib Games team has in store for us. When I asked about specific upcoming features, Max revealed: "In terms of future features and updates, players can expect importing Shiboshi and Sheboshi NFTs, tournaments, and new content on the horizon!"

So grab your bricks, do a little doggy jig, and start constructing! The next level's waiting, and you'll want to beat your buddies to it. Just don't forget to look over your shoulder. Tackle season is always in session.

Enjoy your time in Shibbridge, you splendid Shiboshis. Try not to get dizzy from the spin tackles, and remember: all's fair in love and dogfights (but maybe don't mention that part to the RSPCA or ASPCA).

Shib Games Revolution: Epic Duels, Card Integration, New Metaverse Game, Other Updates

In one epic swoop, Shib Games' mammoth update tosses you into high-stakes SHIB duels, real-time card chaos pulled from Shibarium, and a fishy Metaverse mini-game that's guaranteed to hook you harder than a dodgy Wi-Fi can disconnect you.

PlayWithShib

c In one epic swoop, Shib Games' mammoth update tosses you into high-stakes SHIB duels, real-time card chaos pulled from Shibarium, and a fishy Metaverse mini-game that's guaranteed to hook you harder than a dodgy Wi-Fi can disconnect you.

Here's a rundown of the latest updates:

- Shiba Eternity Goes Full Thunderdome: Crypto Clout
- Shiba Eternity Level Up: Your Card Collection Finally Gets a Direct Connection to Shibarium!
- Shiba Inu's Gaming Universe Gets a Major Boost with Shiboshi NFTs
- Lap Dogs Tournaments: Prepare For Battle!
- Empowering Developers: SDKs for Shib Auth and Shib Pay
- Hold Your Horses (or, Uh, Reins): A New Fishing Mini-Game Hooks Its Way to Shib: The Metaverse!
- Whole New World! Shib: The Metaverse Just Leveled Up!

The Shib Gaming Universe is Leveling Up Like Crazy (and You Should Probably Pay Attention)

From high-stakes card duels to syncing your precious NFTs and the soothing shores of a fishing mini-game, the Shiba Inu ecosystem is undergoing a serious glow-up. Sure, it's still got its quirks and challenges (what crypto project doesn't?), but these updates are a clear signal that the team is committed to building something more than just a meme — they're building a world.

Whether you're a seasoned Shiba veteran, a curious gamer, or just someone looking for a new and interesting way to dive into the world of Web3, now might be the perfect time to give the Shibaverse a closer look. Just be prepared for a wild ride filled with adorable dogs, strategic battles, and the occasional crypto roller-coaster.

After all, in this ever-evolving digital landscape, the only constant is change, and the Shiba Inu ecosystem seems determined to stay one step ahead of the pack.

So grab your leash, gather your Shib frens and prepare to explore the brave new world of dog-themed crypto gaming. It's gonna be a good time, probably!

Shiba Eternity Goes Full Thunderdome: Crypto Clout

Shiba Eternity's new Duels mode plunges players into high-stakes, player-vs-player crypto card combat, where strategy and skill are as important as the \$SHIB at stake.

The stakes are higher than ever in the fast-paced world of Shiba Eternity as \$SHIB is on the line in a high-octane Duels mode where skill, strategy, and your digital wallet determine the victor.

Forget gently nudging your Shiba Eternity decks around; now you're about to chuck 'em into a digital mosh pit, because Duels mode is HERE. That's right, our beloved card battler just got a whole lot spicier, throwing a proper dollop of crypto on the barbie.

\$\$HIB or Bust: Crypto on the Line

So, what's the deal? High-stakes, player-vs-player card combat where your skills – and your digital wallet – are put to the test. This is more than [bragging rights](#) but putting your \$SHIB where your mouth is. The game's all about an ante that you're about to put up for a chance to win. It is like poker, but with Shiboshis.

New to Shibarium? No problem! To participate in Shiba Eternity DUELS, you'll need \$SHIB. Head over to ShibaSwap, the decentralized exchange at the heart of the Shiba Inu ecosystem, to easily acquire \$SHIB and other tokens. It's the perfect place to get started and join the action!

The Cold, Hard Numbers (Because Crypto is Serious Business)

- **Pay to Play:** Each duel requires a \$SHIB entry fee, creating a pot of digital gold ripe for the taking.
- **Winner Takes Most (But Not All):** The victor walks away with a hefty 80% of the loot, leaving the vanquished to lick their wounds (and rebuild their deck).
- **A Pinch for the Burn:** A noble 10% of the pot is chucked into a "burner wallet," the contents of which will be later passed on to [Shib Torch](#). That's right; just for playing the game, you're contributing to supporting the Shib Torch and getting that deflationary ecosystem fired up!
- **The House Always Wins (a Little):** The final 10%? That's the registration fee, presumably greasing the wheels of the digital machine (servers gotta run, ya know?).

Expect Sweaty Palms, Broken Dreams, and No Bots. Only Authentic Players.

So, it sounds fun, right? Before you start mortgaging your digital mansion to enter every duel, let's get real. This is going to be a [cutthroat meta](#), and here's what you can expect:

Deck Building is Now an Arms Race: Prepare to obsess over your card combos, strategizing every minute detail of your deck. The days of casual deck-building are OVER.

Git Gud or Get Rekt: You might be able to throw some cash around, but it's not just pay to win. The bots can do that! Players who learn the ins and outs of the game will triumph and rule this new meta.

Bye Bye, Bankroll: Don't go yolo-ing your entire \$SHIB stash. The stakes are real, and losing streaks are a thing. [Play smart](#), manage your risks, and for god's sake, don't play tilted.

A Strategic Showdown

Shiba Eternity's new Duels mode promises a serious dose of adrenaline! This high-stakes update could inject a potent blend of skill and strategy into the [ecosystem](#).

If the Shib Games team delivers on fair matchmaking, bot-free gameplay, and smooth Shibarium integration, this could be a proper game-changer. It would attract new players and giving the existing community a whole new way to prove their mettle (and earn some crypto along the way).

Prepare for a strategic showdown; this is gonna be wild.

Shiba Eternity Level Up: Your Card Collection Finally Gets a Direct Connection to Shibarium!

Shiba Eternity's latest update directly integrates player card collections with the Shibarium blockchain, offering players true ownership, transparency, and exciting new gameplay features like "card scrapping."

In the world of Shiba Eternity, your digital cards have just become more than collectibles — they are now blockchain-verified assets that you truly own, thanks to the groundbreaking integration with Shibarium.

For Shiba Eternity players, the [latest update](#) isn't just a tweak but a fundamental shift in how your card collection is managed and verified. The game now directly syncs your card inventory with the Shibarium blockchain, bringing a new level of transparency and ownership to your digital assets.

What's Changed? A Behind-the-Scenes Look

Previously, your card collection existed as data within the game itself. While you technically owned the cards, there wasn't a direct, verifiable link to your crypto wallet. Now, everything is tied together through a new card NFT smart contract deployed on [Shibarium](#).

What Does This Mean For YOU, the Player?

True Ownership, Verifiable on the Blockchain: Every card in your connected smart wallet now has a corresponding NFT representation on Shibarium. This means you can independently verify your ownership using blockchain explorers. No more relying solely on the game's internal systems; your cards are now undeniably yours.

Seamless Integration: The card inventory you see in the game is a real-time reflection of what's in your wallet. No more worrying about [synchronization issues](#) or missing cards; what you own is what you see.

Foundation for Future Features: This update isn't just about syncing inventories; it's laying the groundwork for exciting new gameplay mechanics. The new NFT smart contract enables features like "card scrapping," where you can burn existing card NFTs to forge new, potentially rarer, ones.

Card Scrapping: Turning Digital Dross Into Treasure

The upcoming card scrapping feature adds another [layer of strategy](#) to Shiba Eternity.

Tired of those common, low-level cards cluttering your collection? Soon, you'll be able to sacrifice them in a ritualistic burning ceremony (digital, of course) to acquire materials for crafting new cards. This creates a sink for unwanted cards, adds a resource management element to the game, and gives players another way to pursue those elusive legendary cards.

More Than Just a Tech Upgrade

This card inventory update signifies the ongoing convergence of gaming and blockchain technology. By directly linking your card collection to your crypto wallet, Shiba Eternity is embracing the principles of decentralization, ownership, and transparency that are core to the [Web3 movement](#).

This allows you to be more engaged in the ecosystem! It's a win for both players and developers by enhancing the overall gaming experience and fostering a closer connection between the game and the blockchain.

With this update, Shiba Eternity gives players real control over their cards, making them true digital assets on the [blockchain](#). By linking your card collection directly to Shibarium, the game brings transparency and ownership to the next level. This change opens up new possibilities for gameplay and strategy, allowing you to make more meaningful decisions about your collection. The game is shifting, and you now have a bigger role in shaping what comes next.

Shiba Inu's Gaming Universe Gets a Major Boost with Shiboshi NFTs

Shiba Inu's gaming universe is expanding with the long-awaited integration of Shiboshi NFTs, new tournament features, and an increasingly interconnected ecosystem that promises to enhance the player experience.

Shiba Inu's gaming world is undergoing a transformation as Shiboshi NFTs make their debut, tournaments heat up, and players are granted more ways to personalize their gaming experience, pushing the boundaries of what's possible within the Shiba Inu ecosystem.

The Shib Games team isn't resting on its laurels! Beyond the recent update, exciting developments are brewing, promising to expand the Shiba Inu [gaming experience](#), empower game developers, and further integrate the world of Shib with the wider Web3 landscape.

Shiboshi NFTs Unleashed! (Finally!)

Remember those adorable Shiboshis chilling in the [Shibarium](#)? Well, they're finally getting their chance to shine in Shiba Eternity and Agent Shiboshi! Previously, this feature was exclusive to Ethereum-based NFTs, leaving a big chunk of the community tapping their digital paws impatiently.

Just a few days ago, the Shib Games team [announced](#) that everyone can bring their unique Shiboshi avatars into the action, showcasing their personalities and adding a touch of flair to their gameplay. This was truly a top item on the Shiba Inu team's requested list.

Essential Info & Tips to Consider

Before jumping into the [game](#), here are some key points to keep in mind:

Shiboshi NFT Ownership: Ensure you already own Shiboshi [NFTs](#) stored in a compatible wallet before attempting to import them into the game.

Wallet Security: It's vital to connect your wallet to the game via a secure, trusted source. Always verify the URL and the permissions requested before finalizing any transaction.

Import Fees: Bringing each Shiboshi into the game costs 100 Kibble, so make sure you have enough in your wallet to cover the fee.

Game Currency & Resources: You'll likely need additional in-game currency or resources to fully customize your Shiboshis and enhance their abilities—be sure to monitor your inventory.

Card Pack Acquisition: To strengthen your deck, you'll need to understand how to acquire new card packs, whether by earning them in-game or purchasing them.

Deck Building Tips: Success in any collectible card game comes down to strategy and experimentation. Mix and match different Shiboshis and card combinations to craft a deck that's primed for victory.

As the Shiba Inu gaming universe grows, it's not just about playing the game but about shaping your identity, claiming your rewards, and stepping into a [new era](#) where the stakes are higher, the connections deeper, and the rewards more tangible than ever before.

The future is here and it's a game where the stakes are higher and the rewards more tangible than ever.

What This Delivers:

- **Personalization:** More Customization, More Fun: Who doesn't love personalizing their gaming experience? Bringing your own NFT into the game adds a personal touch and allows you to express your [individuality](#).

- **Showing Off:** Let's face it, collecting NFTs is about more than just holding digital assets; it's about showing them off! This update provides a new way to flaunt your prized Shiboshis to the world.

- **Connection:** This is a significant step towards connecting the various elements of the Shiba Inu ecosystem. Your NFTs, your identity, and your gaming experience are becoming increasingly intertwined.

Lap Dogs Tournaments: Prepare For Battle!

Lap Dogs is launching competitive tournaments and integrating Shiboshi and Sheboshi NFTs into gameplay, giving players a structured way to test their skills, earn rewards, and deepen their community connections.

The competition is about to get fierce in Lap Dogs, as esports-style tournaments are on the way, and with Shiboshi and Sheboshi NFTs entering the arena, the stakes have never been higher for players eager to prove their skills.

For those of you who've been patiently waiting for Lap Dogs to level up, the time has come. Soon, you'll be able to

take your competitive side to the next level with the launch of Lap Dogs tournaments. That's right, the Shiba Inu-based game we've all been enjoying is about to get a lot more structured and competitive, giving players the opportunity to test their skills in organized competitions. Whether you're a top dog or a fresh-faced newcomer, these tournaments are set to inject a whole new layer of excitement into the game.

Lap Dogs: Compete, Win, and Prove Your Worth

Tournaments are a huge step forward for Lap Dogs, bringing organized competition into a world that was previously more about [casual fun](#). In its current form, the game allows players to enjoy some light-hearted matches, but once these tournaments drop, the competition will be cranked up to a whole new level. With a structured framework, players will now have clear goals and the chance to prove they're the best of the pack.

Competing in these events isn't just about playing for fun—there's real incentive to show up. Rewards are up for grabs, and winning won't just earn you bragging rights. Whether it's exclusive [NFTs](#), in-game currency, or new collectibles, players will be fighting for tangible prizes. This is the kind of structured, competitive play that can turn Lap Dogs into more than just a way to pass the time—it's a way to carve your name into the leaderboards and leave your mark on the community.

NFT Integration Adds a Personal Touch in Lap Dogs

But that's not all. Lap Dogs is diving deeper into the world of NFTs, allowing players to import their Shiboshi and Sheboshi NFTs directly into gameplay. This beyond having a cool digital companion—your Shiboshi or Sheboshi could actually have a meaningful impact on your performance. These NFTs are more than just collectible assets; now, they'll have practical value in-game.

Imagine this: you're in the midst of a tense tournament, and your Shiboshi companion is right there with you, helping you strategize and providing that personal touch. These NFTs give a sense of individuality to your [matches](#), allowing players to flaunt their unique digital companions in a way that's never been possible before. This integration further blurs the lines between NFTs as mere collectibles and NFTs as functional, gameplay-enhancing assets.

This is why you can get excited:

- **Organized Competition:** Tournaments provide a framework for organized competition, adding a new layer of depth and engagement to the game.
- **Community Building:** Tournaments are a great way to connect with other players, forge new friendships, and build a stronger sense of [community](#).
- **Utility:** Integrating NFTs into gameplay gives them practical value beyond just being collectibles.

Building Community, One Tournament at a Time

Tournaments aren't just about the competition but about fostering a sense of community. While Lap Dogs has always been a fun place to connect with friends, tournaments will take that to the next level.

Players will now have a structured way to engage with each other, whether by joining teams, sharing strategies, or simply enjoying a good old-fashioned rivalry. It's the perfect environment for building relationships and strengthening the Lap Dogs [community](#).

The beauty of these competitions lies in the connections they create. You won't just be playing against random opponents—these tournaments provide an opportunity to meet fellow players, challenge them, and even form lasting friendships. The added sense of competition will make these connections all the more exciting, giving everyone something to look forward to, whether you win or lose.

Lap Dogs is about to get properly stabby. Forget gently patting your virtual pooches; it's fight time. Suddenly, those expensive NFTs might actually do something. So, dust off your tactics guides, because whether you're aiming to top the leaderboards or just want to strut around with your blinged-out hounds, these tournaments promise more canine carnage than you can shake a stick at. And frankly, about time too.

So, get ready, because the next chapter in Lap Dogs is just around the corner, and it's one you won't want to miss.

Empowering Developers: SDKs for Shib Auth and Shib Pay

Shiba Inu's latest move is empowering game developers with SDKs for seamless Web3 integration, bringing wallet-based logins and crypto payments to games, while helping to grow the ecosystem and spark a wave of new decentralized gaming experiences.

The game-changer developers have been waiting for is here: Shiba Inu is rolling out powerful SDKs, enabling easy integration of Web3 services like wallet logins and crypto payments, opening the door to a new era of decentralized gaming.

This is where things get really interesting! The Shib Games team is working on releasing Software Development Kits ([SDKs](#)) that will allow other game developers to seamlessly integrate their games with Web3 services within the Shiba Inu ecosystem.

What This Means:

- **Shib Auth:** Wallet-Based Login: Secure and easy wallet authentication.
- **Shib Pay:** Crypto Commerce: Support for accepting payments in SHIB, USDC, and USDT (Shibarium and Ethereum chains).
- **Broad Compatibility:** Unity support is coming soon, with Unreal Engine to follow. Stay tuned to the Shib Dev Portal for updates.

More to Come

As the team integrates more of Shib OS into games, additional SDKs will be rolled out, providing developers with a powerful toolkit for creating [decentralized gaming](#) experiences.

This is a Game Changer, Why?

Unleashing Creativity: These SDKs lower the barrier to entry for developers looking to experiment with Web3 gaming.

Ecosystem Growth: By making it easier to integrate SHIB and other Shiba Inu tokens into [games](#), this initiative will help to expand the entire ecosystem and drive adoption.

Gaming is about to change: This could lead to a wave of new and innovative games that are powered by the Shiba Inu community.

The Shiba Inu ecosystem is not just about tokens and trading but also about building a vibrant, interconnected community with a thriving [gaming landscape](#). These latest updates demonstrate a commitment to innovation, empowerment, and creating a future where play, ownership, and creativity are all intertwined.

With these new SDKs, Shiba Inu isn't just shaping the future of crypto—it's redefining how developers create and players engage in gaming, unlocking a [world](#) where ownership, creativity, and play go hand in hand. The path to a thriving, interconnected gaming ecosystem starts now, and the possibilities are endless.

Hold Your Horses (or, Uh, Reins): A New Fishing Mini-Game Hooks Its Way to Shib: The Metaverse!

Shiba Inu is reeling in a new wave of excitement with a relaxing fishing mini-game coming soon to Shib: The Metaverse, giving Shibizens a peaceful break from the action and a chance to use \$TREAT tokens in a whole new way.

Alright, Shibizens, the moment you've been waiting for has finally arrived. It's time to take a breather.

For those of you who aren't constantly grinding it out in Shiba Eternity or staking your \$SHIB in high-stakes crypto battles, the Shiba Inu ecosystem is planning to roll out a refreshing new addition that's about to reel you in. If you're a fan of relaxing activities and a bit of escapism, you're in for a treat (pun intended).

Enter the Shib: The Metaverse [fishing mini-game](#). That's right, those of you who love the tranquil pleasure of casting a line into calm waters and taking a break from the action will soon be able to do just that. Shiba Inu is rolling out a brand-new way to experience the Metaverse, where you can kick back, relax, and fish your worries away.

Hook, Line, and Sinker: What to Expect

The fishing mini-game, which is currently in its early conceptual and design stages, is slated to enter full development this quarter. Once ready, Shibizens will be able to access the entire Shib: The Metaverse to enjoy fishing anywhere they choose. Whether you're in the serene corners of the virtual world or near bustling, [digital lakesides](#), the game will offer an open-ended, peaceful escape that's all about slowing down and enjoying the simple pleasures.

There's still a lot to be revealed as the development continues, but what we do know is that this new mini-game will integrate seamlessly with the Metaverse, allowing players to take a break from more intense activities. Gone are the days of constant battle—now, you can fish in [virtual waters](#), collect some digital catches, and enjoy a serene, meditative moment.

But it gets even better: to get in on the action first, you'll want to hold Shiba Inu Treat ([\\$TREAT](#)). Those who own them get priority access when the mini-game

drops. This is a great way to add another layer of utility to \$TREAT, which will serve not only as a ticket to the game but also as a potential way to earn rewards while you unwind.

More Than Just Fish: A Calming Space for Shibizens

One of the most exciting things about the fishing mini-game is the chance it offers to create your own calming, peaceful space within Shib: The Metaverse. While many players are drawn to the excitement of card battles, the adrenaline of [competitions](#), or the thrill of staking and trading, this new fishing game provides a much-needed opportunity to relax. Picture yourself sitting on a digital dock, fishing pole in hand, watching the water ripple, and feeling the tension of the real world melt away.

This new feature taps into the growing desire for escapism in the digital age. More than just an interactive activity, the fishing mini-game presents a tranquil retreat where players can take a moment to recharge their batteries, away from the hustle and bustle of the virtual world. For players who spend a lot of time in the fast-paced, high-stakes environments of Shiba Inu's broader ecosystem, this is an opportunity to unwind and reconnect with the slower, more meditative side of digital life.

A Hook for Everyone: The Calm Before the Storm

So, what does this new fishing mini-game mean for the future of Shib: The Metaverse? It's clear that Shiba Inu is looking to diversify its ecosystem, offering something for everyone. Whether you're into intense competitive play or prefer to take things slow, there's now a place for you. The introduction of this mini-game not only makes the Metaverse more accessible but also shows the Shiba Inu team's commitment to creating a rich, varied digital experience.

As the waters of Shib: The Metaverse continue to expand, Shiba Inu isn't just about high-octane battles and crypto rewards. With the fishing mini-game, the ecosystem is offering a much-needed breather, where players can relax, earn, and connect with the community in a whole new way. Stay tuned for updates, because with \$TREAT in hand, it's only a matter of time before you're casting your line into the future of the Metaverse.

A Whole New World! Shib: The Metaverse Just Leveled Up!

Shib: The Metaverse just dropped a game-changing update, leveling up the virtual world with browser access, enhanced chat, and a creative playground for landowners.

Shib: The Metaverse, the expansive virtual world that launched last December, is rolling out a series of updates designed to make it more accessible, engaging, and, well, just plain better. Think of it as a major patch, but instead of only fixing bugs, it's adding features that promise a whole new world of virtual possibilities.

So, what's new in this upgraded metaverse? Let's take a look.

Easier Access: Browser-Based Exploration Now Available on Shib: The Metaverse

Perhaps the most impactful change is the introduction of browser-based access via the revamped ShibPortal. Recognizing that not everyone has access to high-end PCs, the developers have eliminated the need to download the entire [metaverse](#) application. This new browser-based option removes a significant barrier, allowing a wider range of users to jump in and experience the metaverse directly from their web browser. However, it's important to note that access is still facilitated through the ShibPortal, which currently requires a Windows operating system.

This move aligns with a broader trend in the metaverse and Web3 space towards greater accessibility and user-friendliness. By reducing the need for specialized software, the platform is opening its doors to a wider audience, including those who may be hesitant to download and install large applications.

It's worth noting that there's a one-hour daily play limit for browser access. While this may seem restrictive, it provides a convenient way for users to get a taste of what the [platform](#) has to offer without committing to a longer session. It also allows the developers to manage server load and ensure a smooth experience for all users.

Stay in the Loop: Chat Ticker in Shib: The Metaverse Keeps You Connected

Communication is key in any virtual world and the platform is making it easier to stay connected with a new chat ticker. This ticker displays a scrolling feed of new messages in the chat, ensuring that you never miss out on important conversations, announcements, or community events.

Real-time communication, in this dynamic and evolving virtual environment, is essential for building relationships, collaborating on projects, and staying informed about the [latest developments](#). The chat ticker provides a constant stream of information, allowing users to quickly scan the conversation and jump in when something catches their eye.

This feature is particularly valuable for new users who are just getting acquainted with the metaverse and want to connect with other members of the community.

Get Creative: Plot Builder Expands Customization Options

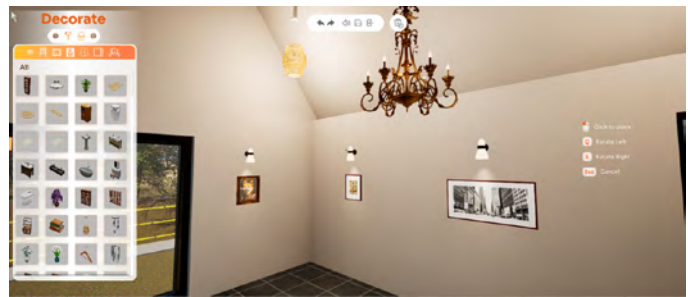

For those who own land, the [Plot Builder](#) is getting a major upgrade with a host of new furniture and decor options. This means you can now customize your virtual plots with even more detail and create truly unique and personalized spaces that reflect your individual style and vision.

Whether you're looking to build a cozy virtual home, a bustling marketplace, or a sprawling outdoor landscape, the expanded Plot Builder provides the tools you need to bring your creative vision to life. The new furniture and decor options range from practical items like tables and chairs to more decorative elements like plants, artwork, and lighting fixtures.

This update empowers users to express their individuality and contribute to the overall richness and diversity of the metaverse environment. It also encourages greater [engagement](#) and investment in the platform, as landowners are now able to create more compelling and valuable virtual spaces.

Streamlined Login: Access Your World with Ease

The Shib Portal, your gateway to all things metaverse, has also been improved to make logging in easier and more secure. These enhancements are designed to streamline the onboarding process for new users and provide a more convenient experience for existing members.

Key improvements include:

Automatic Wallet Creation: When using email login, a wallet is now automatically created and associated with the user's account. This eliminates the need for new users to manually create and configure a wallet, simplifying the process of getting started in the metaverse.

Browser Login for External Wallets: For users who prefer to use external wallets like MetaMask, browser login is now available. This eliminates the need to scan a [QR code](#) with a mobile device, making it easier to access your virtual world from your computer.

These changes not only make it easier to log in but also enhance the security of the platform by providing users with more control over their digital assets.

Step in the Right Direction

These latest updates represent a positive step forward for the platform. By focusing on accessibility, communication, and creative tools, the developers are creating a more engaging and user-friendly experience that is likely to attract a wider audience.

While the project is still relatively young, these updates demonstrate a commitment to continuous improvement and a clear vision for the future. As the metaverse landscape continues to evolve, it is positioning itself as a platform to watch.

What are you waiting for? Step into the upgraded metaverse and unlock an entirely new realm of immersive interaction and boundless creativity. The future of virtual worlds has arrived — and it's more vibrant and exhilarating than you ever imagined.

Bridging the Gap: Integrating Your Token with Shibarium

Seamlessly bridge your ERC-20 token to Shibarium, tapping into cross-chain functionality and expanded user access with either the robust CCIP or the simplified Shiba Inu PoS Bridge.

By John Doe, Shibarium Engineering Manager

The Shibarium network offers exciting possibilities for token developers, and a key aspect of maximizing your token's potential lies in bridging it effectively.

Two primary pathways exist for integrating your ERC-20 token with the Shibarium bridge: leveraging the power of Chainlink's Cross-Chain Interoperability Protocol (CCIP) or opting for the streamlined approach of the Shiba Inu Proof-of-Stake (PoS) Bridge.

This article will explore both options, empowering you to make an informed decision for your project.

Method 1: Harnessing the Efficiency of CCIP

For developers seeking a robust and highly customizable solution, CCIP presents a compelling option. This [open-source framework](#), developed by Chainlink, facilitates rapid and cost-effective transactions across multiple blockchain networks.

CCIP's significance stems from its ability to enable seamless cross-chain token transfers, unlocking a range of functionalities, from facilitating payments and reward distributions to enabling asset movement between networks.

CCIP's architecture employs a sophisticated dual consensus mechanism, combining the strengths of Plasma and [Proof-of-Stake systems](#). This hybrid approach ensures both speed and security, crucial considerations for any cross-chain integration.

The development process involves project registration, custom token creation, and the development of dApps that recognize these [cross-chain tokens](#). Upon user transaction initiation, tokens are burned on the originating chain and subsequently unlocked on Shibarium through the bridge's consensus mechanism.

The Cross-Chain Token (CCT) standard, also provided by Chainlink, allows developers to retain full control over their token and its ongoing maintenance.

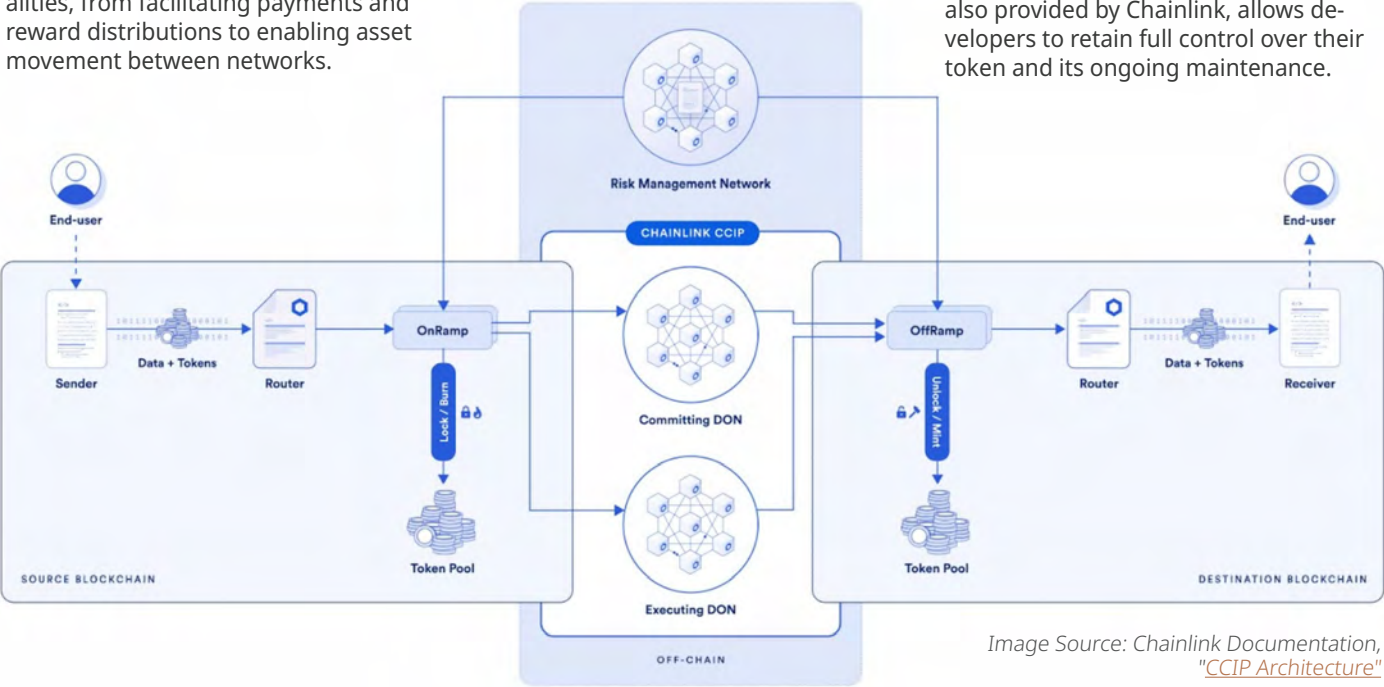

Image Source: Chainlink Documentation, ["CCIP Architecture"](#)

A Deeper Look at the CCT Standard:

The CCT standard addresses the prevalent issue of liquidity fragmentation in the multi-chain ecosystem. By empowering projects to enable cross-chain functionality for their tokens independently, CCT facilitates rapid expansion to other blockchains supported by CCIP.

The Cross-Chain Token (CCT) Standard

Self-Serve Deployments

NEW

Developer Control and Flexibility

Programmable Transfers

Token Developer Attestation

PRIVATE BETA

Defense-in-Depth Security

No Liquidity Pools Required

Zero-Slippage Transfers

Image Source: Chainlink Blog, [What Is CCT \(Cross-Chain Token Standard\)?](#)

The Advantages of CCIP:

Enhanced Transaction Speed: CCIP significantly accelerates transaction processing compared to traditional methods.

Cost-Effectiveness: Cross-chain fees associated with CCIP are typically lower than those encountered with conventional blockchain transfer methods.

Increased Accessibility: CCIP simplifies onboarding for new blockchain users, expanding the potential user base for your token.

Key Benefits of the CCT Standard:

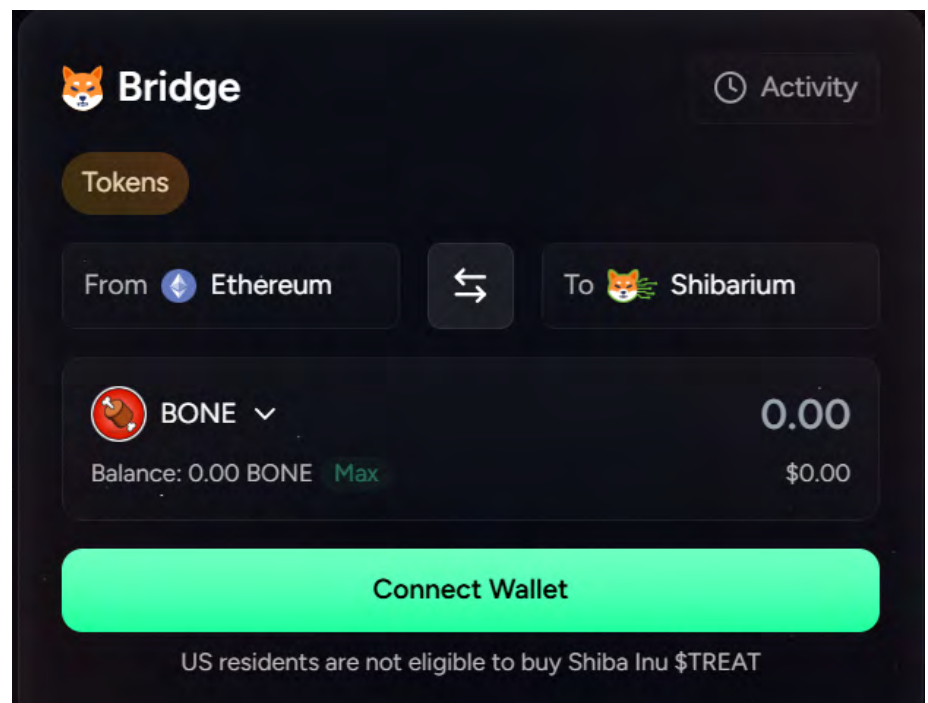

- **Permissionless Deployment:** Token developers can launch or enable cross-chain functionality for existing tokens with minimal effort.
- **Developer Autonomy:** Complete ownership of token contracts, token pools, and implementation logic is retained by the [developers](#).
- **Robust Security:** CCT leverages Chainlink's oracle networks, fortified by additional security layers like the Risk Management Network.
- **Programmable Transfers:** Complex use cases are enabled through the support for simultaneous token and message transfers.
- **Elimination of Liquidity Pools:** CCT's innovative approach removes the need for traditional liquidity pools.
- **Zero-Slippage Transfers:** Pre-audited token pool contracts guarantee zero-slippage cross-chain transfers.
- **Streamlined Integration:** Existing [ERC20-compatible tokens](#) can be readily adapted for cross-chain functionality.

**Essential CCT Terminology:**

- **Token Developer/Owner/Administrator:** The roles responsible for token management.
- **EOA/Smart Account:** Standard and programmable blockchain accounts.
- **ERC20-Compatible Token:** Tokens adhering to the ERC20 standard.
- **Token Pool:** An abstraction layer for managing token operations.

Method 2: The Streamlined Shiba Inu PoS Bridge

For a more straightforward integration process, the [Shiba Inu PoS Bridge](#) offers a viable alternative. This method involves submitting an ERC20 Token Submission form, simplifying the technical complexities often associated with cross-chain bridging.

The ERC20 Token Submission Form:

The form requires the following information:

- Token Name
- Token Symbol
- Decimals
- Root Contract Address
- Token Website
- Token Project Description
- Contact Email
- Additional Contact Method
- Additional Notes

Upon submission, the Shiba Inu team will deploy a basic ERC-20 contract, enabling your tokens to be bridged within the Shibarium network. Find the form [here](#).

ERC20 Token Submission for Shibarium Bridge Integration

Submit your ERC20 token details to request integration with the Shibarium Bridge. Provide accurate information about your token and project to ensure a smooth review and onboarding process.

Token Details

Name *

Enter the name of your token

Symbol *

Provide the token's symbol, e.g., BONE

Decimals *

Specify the number of decimals, e.g., 18

Enter a value for this field.

Root Contract Address *

Choosing the Optimal Path

The decision between CCIP and the Shiba Inu PoS Bridge hinges on your project's specific requirements and your team's technical capabilities. CCIP provides extensive customization and control, while the PoS Bridge offers a more accessible entry point for basic token bridging. Carefully evaluate the features and complexities of each method to determine the most suitable approach for your token's integration with Shibarium.

DOGGY BYTES

Today we're celebrating a series of fantastic accomplishments that highlight the strength and spirit of this amazing community!

Best of Shib

This week in the Shiba Inu ecosystem has been nothing short of electrifying! You can now [import your Shiboshis](#) into the Web3 versions of Shiba Eternity and Agent Shiboshi. Meanwhile, The Shib Magazine is revving up excitement as a proud [sponsor of the Meme X Festival](#) where meme culture will be celebrated in all its chaotic brilliance. Don't miss the chance to amplify your meme game!

Adding to the buzz, the legendary DeLorean meets the adorable [DMC Shiba Inu design](#). With only 8 of these exclusive digital cars in the world, it's time to celebrate this one-of-a-kind treasure.

And in an insightful conversation, Bill Qian from Cypher Capital sits down with Shytoshi Kusama to ask the Shiba Inu Lead Ambassador burning questions about SHIB, the future of AI, and more. Check out the full interview [here!](#)

20K Cheers for Bad Idea AI: A Milestone Worth Its Weight in \$BAD

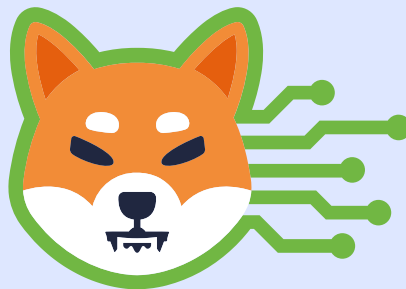

Huge shoutout to Bad Idea AI for hitting the amazing milestone of 20,000 holders! We can't wait to see the excitement when the community reaches 25k, especially with that epic burn of 680 billion \$BAD!

\$SHIB is predicted to "look even sexier than it does now" with a strong pump

Cypher Capital CIO Bill Quant declared that Shiba Inu is “integrating with institutions” following his interview with Shytoshi Kusama on the “Bill it Up” podcast. His tweet highlighted SHIB’s historic alliance with the UAE Ministry of Energy and Infrastructure (MoEI), signaling a major step toward mainstream adoption.

So there you have it, degens. Before you go, here's a quote you might want to keep in mind today:

“As the value goes up, heads start to swivel and skeptics begin to soften. Starting a new currency is easy, anyone can do it. The trick is getting people to accept it because it is their use that gives the ‘money’ value.”

- Adam B. Levine, Tokenly CEO
